

## BI 310 V2 CICADA

The BI 310 v2 Cicada is a low cost beacon designed to track pallets, cargo boxes, and other valuable assets.

The most popular use case is a one-time application for logistics companies that need to verify that their pallets reached their final destination.

There are a few modifications. The regular version uses LBS and Wi-Fi to determine its location, but you can also add a GPS, temperature sensor, and rechargeable battery for long-term use.

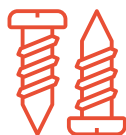

For installation you can use sticker, or plastic clamps, or screws.

Sim card - plastic, or integrated sim chip (MFF2)

## Fitting:

adhesive tape

screws

sticker

plastic clamps
